

Sayed Esmail

Senior Front-End Engineer | Vue.js Specialist

Cairo, Egypt | +20 1141688252 | sayed.5atab@gmail.com | [linkedin.com/in/sayed-esmail-khattab](https://www.linkedin.com/in/sayed-esmail-khattab)

PROFESSIONAL SUMMARY

Senior Front-End Engineer with 9+ years of experience building scalable SaaS platforms, real-time systems, and multi-tenant applications using Vue.js and React.

Specialized in architecting complex frontend systems, optimizing performance, and building schema-driven platforms for high-growth startups. Experienced leading frontend development across dashboards, live tracking systems, automation platforms, and large-scale customer portals.

TECHNICAL SKILLS

- ❖ **Frontend:** Vue.js 2/3, Nuxt 3, React, Next.js, Angular
- ❖ **State Management:** Pinia, Zustand, Redux Toolkit
- ❖ **Architecture:** Multi-tenant SaaS, Schema-driven UI, Real-time systems
- ❖ **Styling:** Tailwind CSS, Vuetify, Material UI, Sass
- ❖ **Backend Exposure:** Node.js, Express, Prisma, PostgreSQL
- ❖ **Tools:** Vite, Webpack, Git, CI/CD, Jira

WORK EXPERIENCE

Senior Front-End Engineer, Schoolz — Routz Platform — Giza, Egypt | Jan 2025 – Present
SaaS platform for fleet management, school transportation, and live tracking.

- Built the front-end architecture for the fleet and logistics platform from scratch using Vue 3, creating separate dashboards for admins and clients.
- Built custom Node.js socket services to power a real-time GPS tracking system, allowing live monitoring of active trips and driver locations.
- Integrated interactive maps and location APIs to handle geocoding, precise map centering, and route planning.
- Developed core platform features including driver management workflows, trip scheduling, and complex billing and subscription interfaces.
- Created a reusable component library and modular Vue composables to standardize the UI and ensure a seamless bilingual experience (Arabic/English).

Senior Front-End Engineer / Team Lead Untap — Cairo, Egypt | Dec 2022 – Apr 2026
Multi-tenant SaaS platform for competitions, innovation programs, grants, and event management.

- Built a single, large-scale Vue 3 codebase that houses three distinct platforms (Admin Dashboards, Customer Portals, and Public Subdomains) using dynamic routing.
- Handled complex multi-tenant logic, allowing each client to have their own dynamic themes, permission roles, and runtime configurations.
- Integrated and heavily customized **SurveyJS** and **GrapesJS** to build a schema-driven form creator and a drag-and-drop page builder.
- Reduced initial dashboard load time by 40% through Vite optimization, route-level code splitting, and state refactoring.
- Built responsive, reusable UI components with full support for seamless bilingual switching (Arabic RTL / English LTR).
- Applied strict secure frontend practices and permission-based access controls to align the platform with ISO security standards.

Full-Stack Engineer Zads — **Local Learning Community Platform** — Egypt SaaS education marketplace connecting learners with nearby teachers through geo-based discovery.

- Built the complete back-end architecture from scratch using **Node.js, Express, Prisma ORM, and PostgreSQL** to serve a multi-app ecosystem.
- Developed the main web application and admin dashboards using **Nuxt 3 and Vue 3**, and currently leading a strategic migration to a unified **Next.js and React** application.
- Engineered a geo-proximity search system to directly connect learners with nearby teachers based on exact location mapping and distance routing.
- Built dynamic pricing modules and automated business workflows, including the smart auto-generation of tutor requests when parents register their children.
- Implemented secure role-based access control (CASL), integrated Firebase push notifications, and ensured seamless bilingual (Arabic RTL / English LTR) interfaces.

Front-End Engineer, AutoTager — Cairo, Egypt | Jan 2022 – Dec 2022
Automotive marketplace and B2B dealership platform.

- Built data-heavy **Admin, Client, and Dealer dashboards in React.js**, incorporating real-time analytics, inventory management, and multi-tenant marketplace structures.
- Translated complex, high-fidelity Figma layouts into a production-ready, reusable React component library, cutting design-to-development handoff time by half.

Front-End Engineer, Botme — Giza, Egypt | Jan 2018 – Jan 2022

Omnichannel AI chatbot and automation SaaS platform.

- Developed and optimized an omnichannel chatbot builder using Vue.js and Angular (2+), serving 5,000+ active business users monthly.
- Contributed to the development of **Botme Shops**, an automated e-commerce solution featured globally at **Facebook F8 Refresh 2021**.
- Designed end-to-end UX flows for Live Chat, visual flow automation, and interactive form modules, boosting core user engagement metric values.

Earlier Roles

MoreCreative (2017–18) | Enjaz – KSA Remote (2014–17) | MTC – Qatar Remote (2015–16) | Webdivs (Freelance)

- Designed and built custom WordPress, WooCommerce, and Shopify themes, and integrated custom APIs for clients across the MENA region.

SELECTED FREELANCE PROJECTS

- ❖ **Kadouscope** — Front-end overhaul of a complex analytics dashboard in **React.js**; successfully optimized rendering speeds, responsive usability, and overall visual consistency.
- ❖ **Movex** — Custom responsive platform featuring real-time shipment tracking API integration for a fast-growing logistics provider.
- ❖ **Yanfaa & Wellpal** — Executed full UI/UX redesigns and custom storefront layout implementations, maximizing client conversion rates and frontend responsiveness across viewports.

CORE EXPERTISE

- ❖ SaaS Platforms
- ❖ Multi-tenant Architecture
- ❖ Real-time Applications
- ❖ Frontend Performance Optimization
- ❖ Component Libraries
- ❖ Schema-driven UI
- ❖ Dashboard Systems
- ❖ RTL/LTR Internationalization

EDUCATION & LANGUAGES

Bachelor of Arts, Philosophy — Damanshour University — 2009 – 2013

Languages: Arabic (Native) | English (Full Professional Proficiency)
